CHECKLIST

Desk selection checklist

- [ ] List every device that will sit on the desk and measure its width and depth
- [ ] Measure the wall space and subtract the desk depth to confirm clearance of at least eighty centimetres
- [ ] Count power cables—four or more means prioritise built-in cable management
- [ ] Check the desk's weight capacity against the combined mass of your equipment
- [ ] Measure from floor to thigh while seated and confirm the desk clearance exceeds that by five centimetres
- [ ] Look past marketing labels and compare actual depth, storage and cable features to your needs
